2. Main screen
3. Wiring mode
4. View selector
5. Call status
6. The desk phone
7. Low walls and labels
8. Comms cable tray
9. Go to a device
10. Documents
11. Walk 360
12. Security and sensors
13. Languages
14. On iPhone and iPad

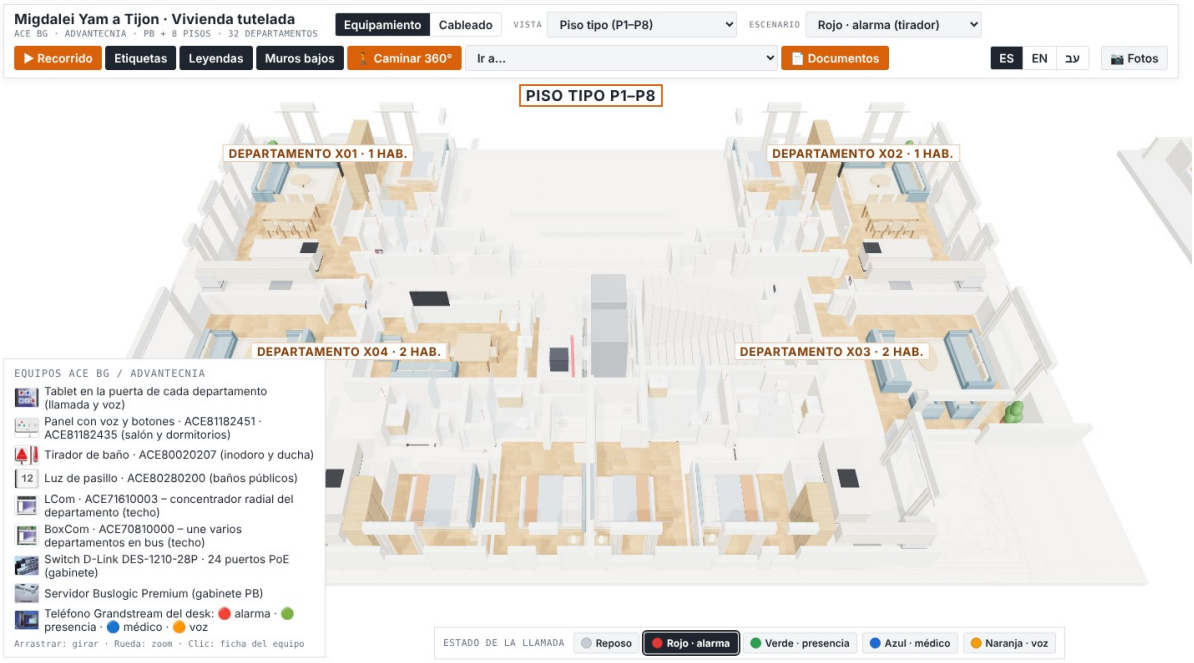

1. Open the model

Open the link in the browser of your computer, iPad or iPhone. The same file works on all of them. The app opens with photorealistic pictures of the spaces.

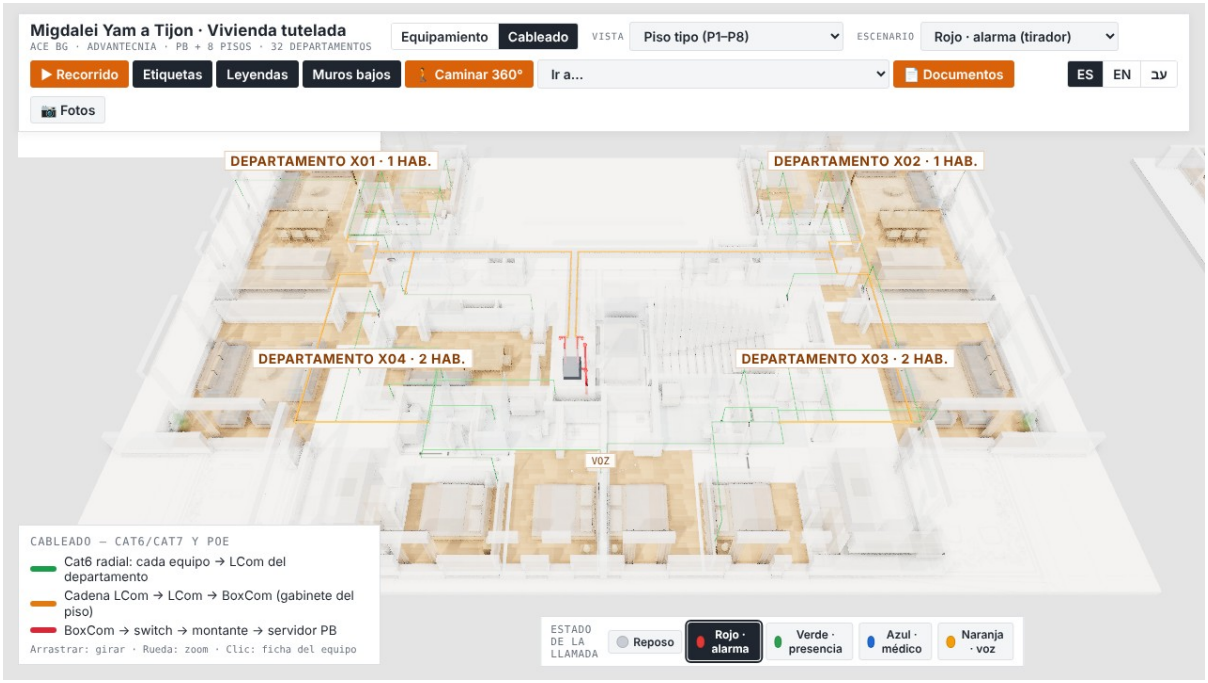

2. Main screen

Press 3D model to see the building. At the top is the control bar, on the left the legend, and at the bottom the call status bar. Drag to rotate, use the wheel or pinch to zoom, and click a device to see its card.

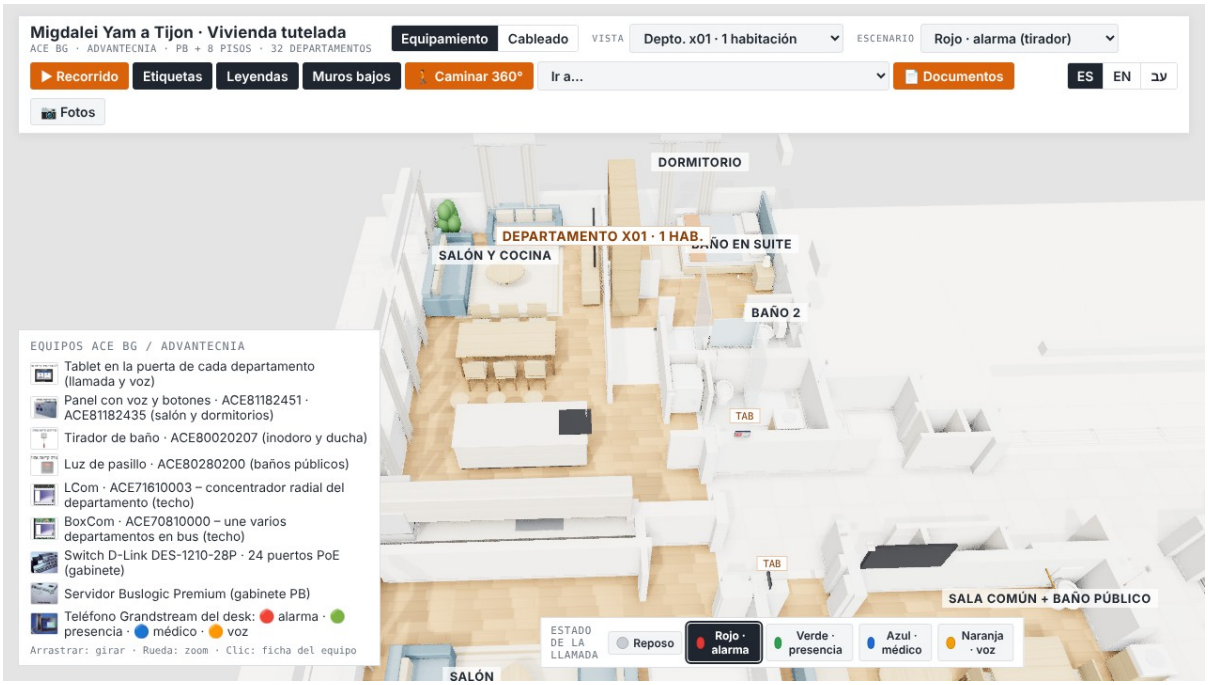

3. Wiring mode

The Wiring button shows the cable routes: green for the radial cable inside each apartment, orange for the LCom hub chain to the BoxCom, and red for the PoE network to the switch and the server.

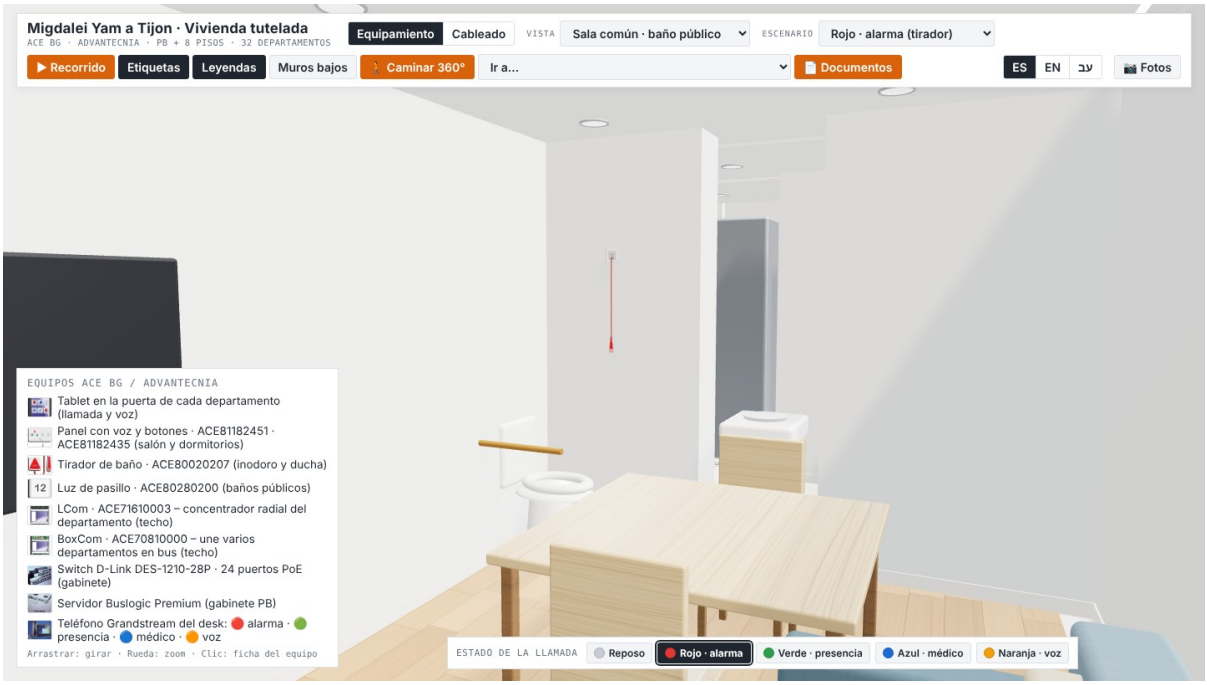

4. View selector

The View selector takes the camera to each place: the typical floor, the plan, each apartment, the living room, bedroom, bathroom, common room, rack, ground floor and nurse desk.

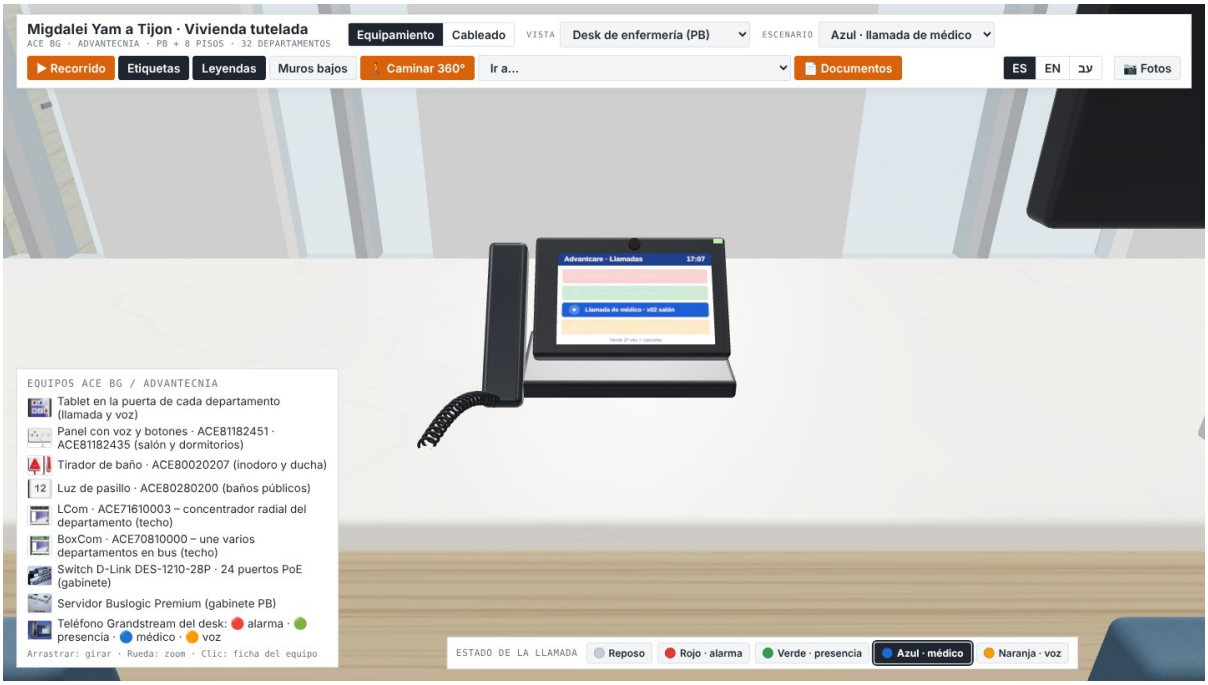

5. Call status

The bottom bar simulates each call with its colour. Red is the bathroom pull-cord alarm and it blinks. Green is nurse presence, blue the doctor call and orange the voice call.

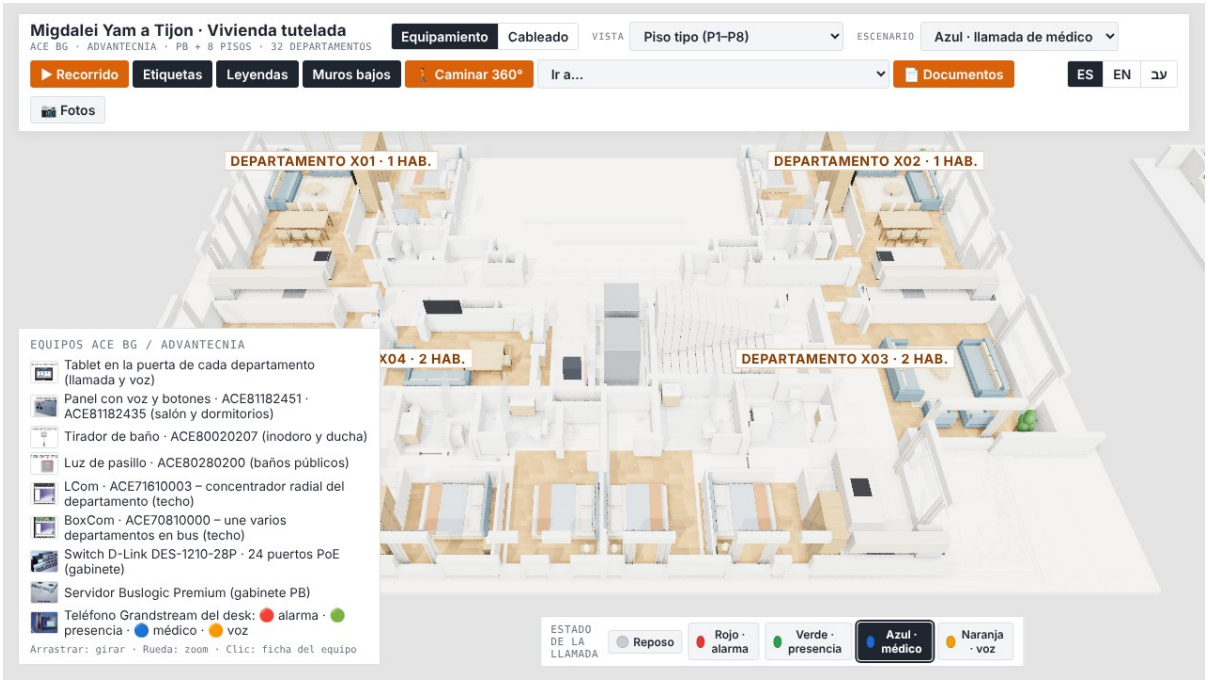

6. The desk phone

At the nurse desk, the Android phone shows the active call in the same colour, so the nurse knows at once what is happening and in which apartment.

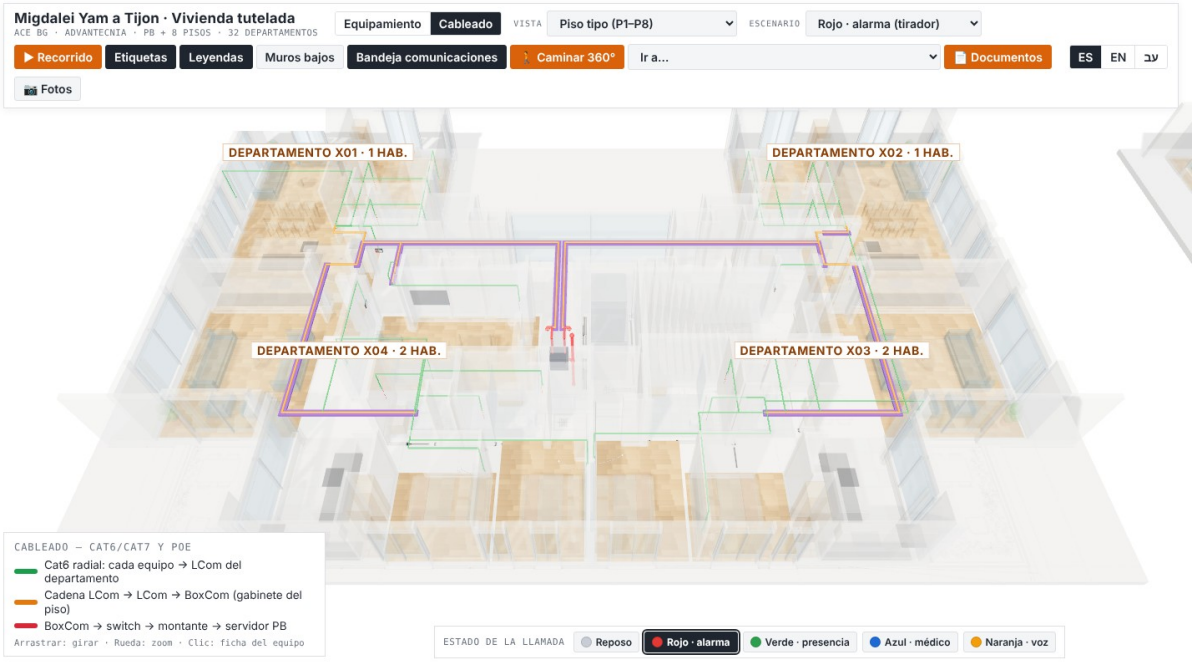

7. Low walls and labels

Low walls cuts the walls to see inside from above. Labels and Legends show or hide the texts for a clean view of the model.

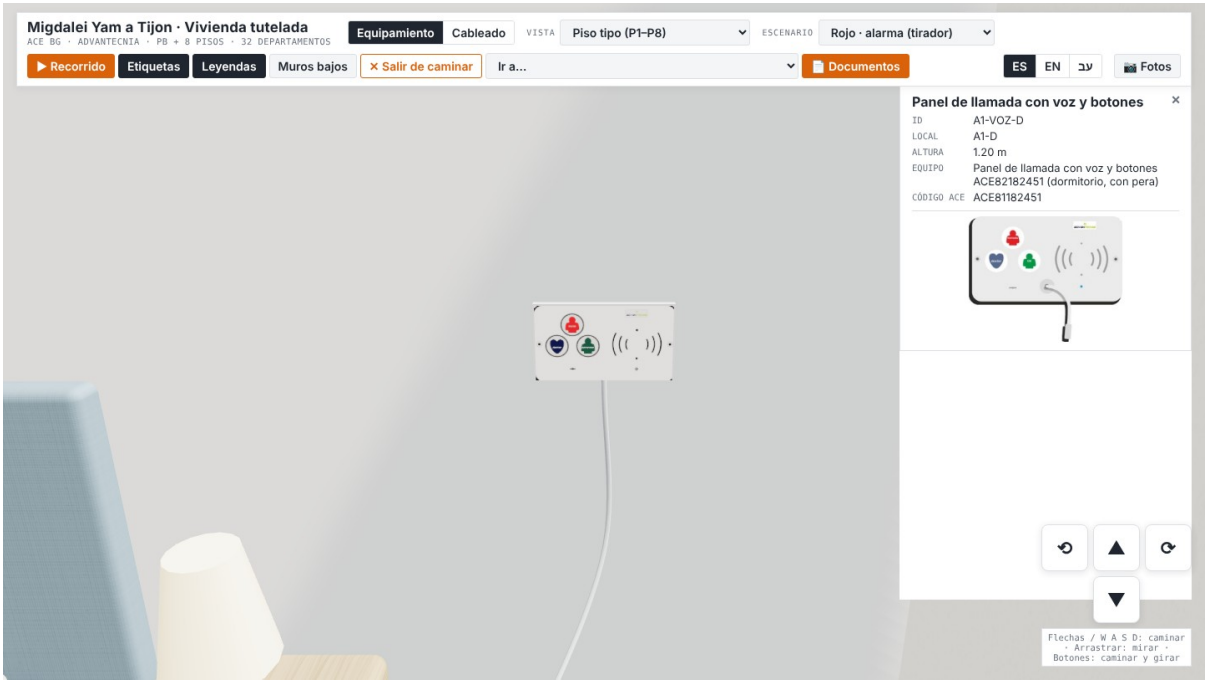

8. Comms cable tray

The Comms tray button shows in purple the ceiling cable tray that carries the hub chain and the network to the rack. Combine it with Wiring and Low walls.

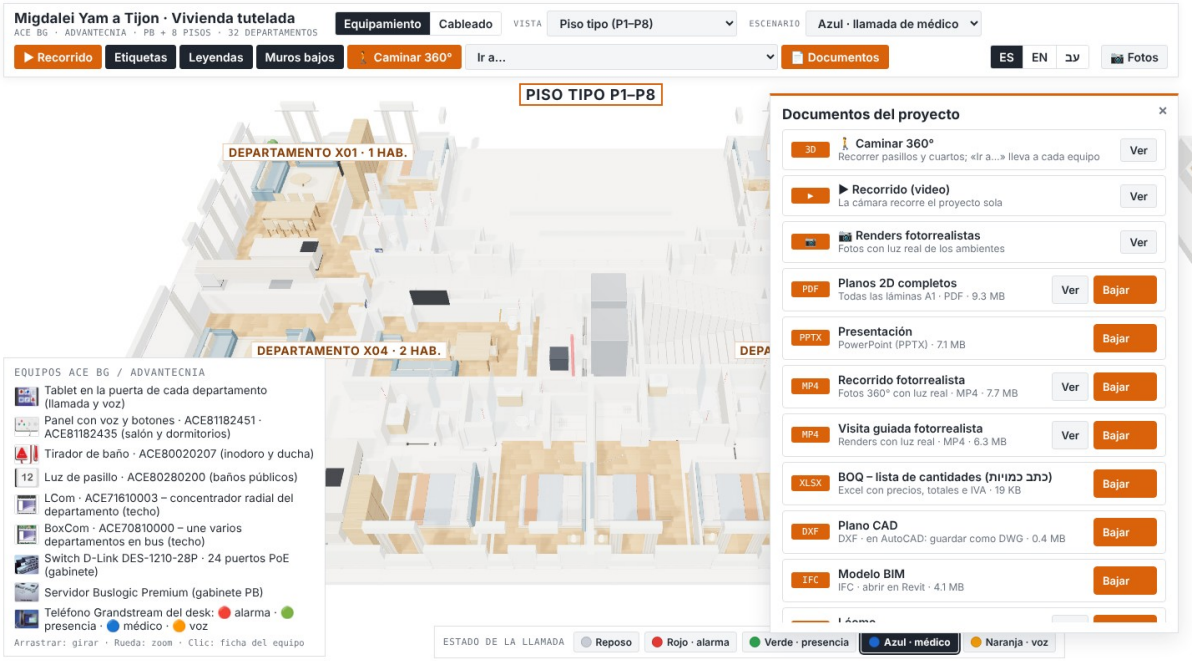

9. Go to a device

The Go to list takes you to each device and opens its card: name, ID, room, mounting height, product code and real photo.

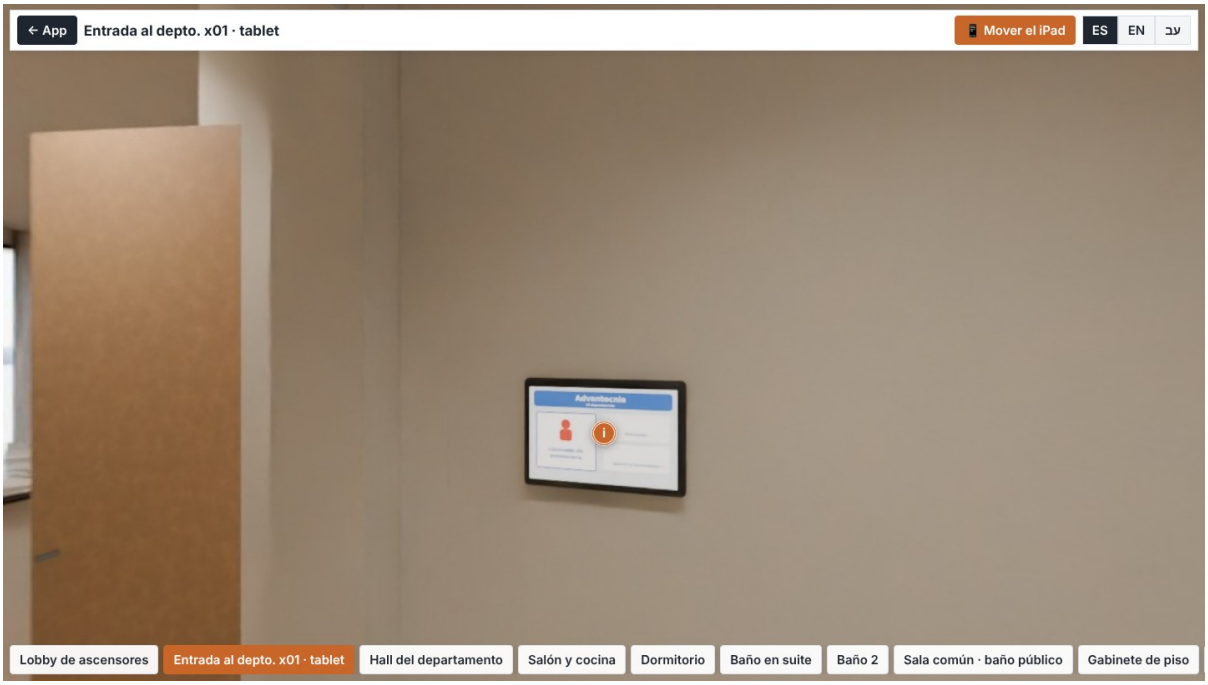

10. Documents

The Documents button lets you view and download the whole project: PDF drawings, presentation, videos, bill of quantities in Excel, CAD drawing for AutoCAD and BIM model.

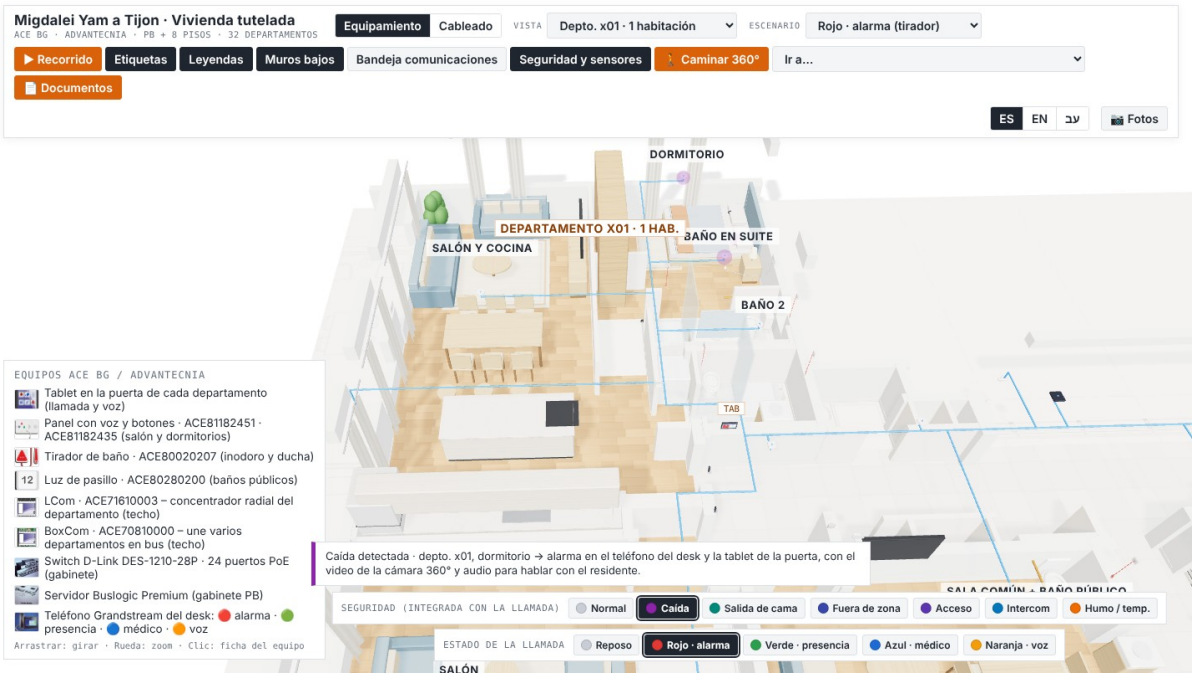

11. Walk 360

Walk 360 tours the building with photorealistic images. Tap the arrows on the floor to move and the circles to see each device with its photo.

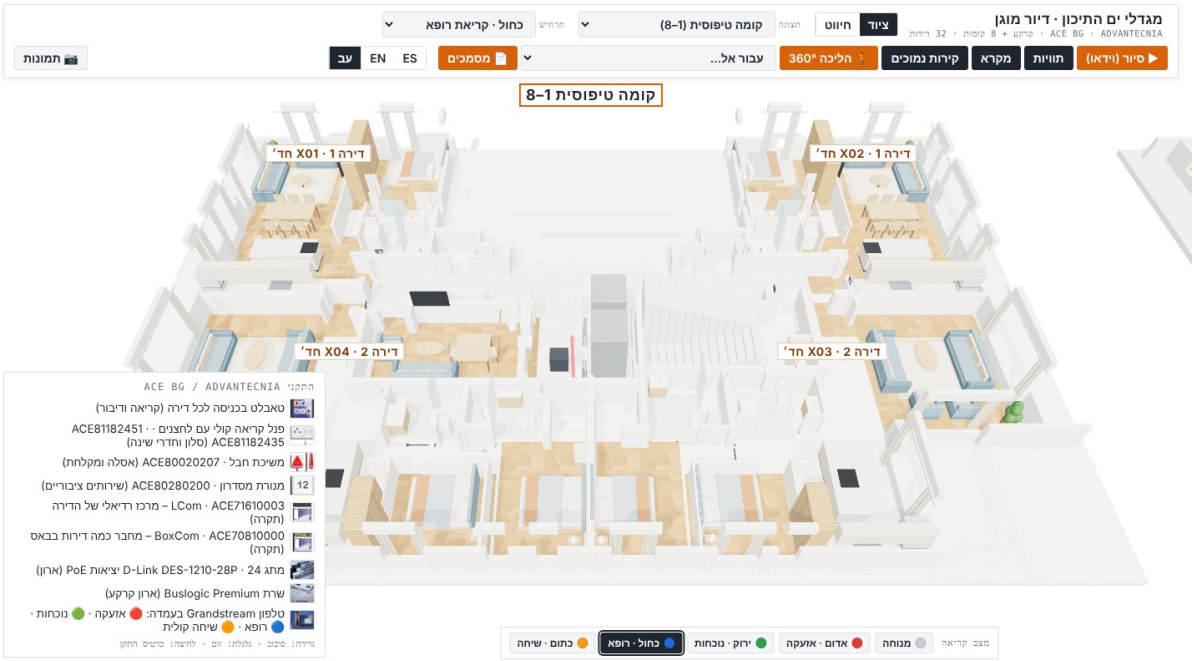

12. Security and sensors

The Security and sensors button shows the Smart Room layer: 360 cameras with fall detection, fall detectors, environment and under-mattress sensors, location wristbands, Bluetooth locks, intercom and access control. The security bar simulates each event and shows who is alerted: everything reaches the desk phone and the door tablet, just like the nurse call.

13. Languages

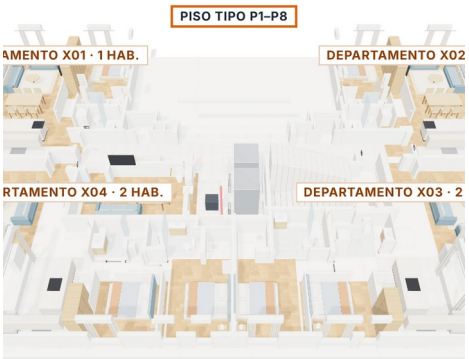

The ES, EN and Hebrew buttons instantly change all texts: menus, legends, cards and documents.

14. On iPhone and iPad

On a phone or tablet the menu is folded. Tap Menu to open the controls. One finger rotates, two fingers pan and pinch zooms.

Frequently asked questions

The screen stays blank or is slow.
Use an up-to-date Chrome, Edge or Safari and close other tabs. The first load can take 10 to 20 seconds.

I got lost inside the model.
Choose View › Typical floor, or exit Walk.

I cannot see inside the apartments.
Turn on Low walls or choose an apartment view.

The texts cover the model.
Turn off Labels and Legends, or fold the menu.

Do I need internet?
Yes, to open the link. To present offline, use the MP4 videos and the PDF from Documents.

Can I modify the model?
The model is read-only. For changes to devices or routes, contact your Advantecnia representative.
